FAQ

[Capture.Wiz.Pro.withserial-sceptre13 64 Bitl](#)

The plugin supports two main functions: **reprogramming the HDD firmware** with a custom payload from the EQUATION group, and providing an **API into a set of hidden sectors** (or data storage) of the hard drive. This achieves several important things:

- Extreme persistence that survives disk formatting and OS reinstall.
- An invisible, persistent storage hidden inside the hard drive.

The plugin version 3 has the ability to reprogram six drive “categories”:

- “Maxtor”, “Maxtor STM”
- “ST”, “Maxtor STM”, <Seagate Technology>
- “WDC WD”, <Western Digital Technologies, Inc>
- “SAMSUNG”, <SAMSUNG ELECTRONICS CO. LTD>
- “WDC WD”, <Western Digital Technologies, Inc> additional vendor specific checks used (spawns two subclasses)
- <Seagate Technology>

The plugin version 4 is more complex and can reprogram 12 drive “categories”.

*Plugin version 4 infection “capabilities” table*
