Levels of inorganic nitrogen in the eutrophic Wonghwa Lake in Korea. The concentrations of NH_4^+ and NO_3^- in the eutrophic Wonghwa Lake were monitored using two separate methods: (1) a laboratory method that involves measuring NH_4^+ and NO_3^- using an ion chromatograph and (2) an outdoor method that involves measuring NH_4^+ and NO_3^- concentrations in water samples taken from the surface and deep of the water using a flow injection system. The results of the study showed that the mean NH_4^+ concentrations measured using the laboratory and the outdoor methods were 8,333 microg N/L and 2,414 microg N/L, respectively. The mean NO_3^- concentrations measured using the laboratory and the outdoor methods were 1,441 microg N/L and 1,468 microg N/L, respectively. The observed values of NH_4^+ and NO_3^- were mostly below the values for normal upper eutrophic water, suggesting that NH_4^+ and NO_3^- cannot act as the limiting nutrients for the growth of phytoplankton in Wonghwa Lake. On May 21, 2018, we held a discussion session to introduce the first batch of LOANO students to our programme. This was part of the project we are currently working on at "The Seed", a non-profit organisation we created with the idea of supporting entrepreneurship in Kenya. The session was a great success! We hope you will all find our programme and LOANO relevant to your future. Please find attached our post-session evaluation forms for all our attendees to fill out after the session, in English or Kiswahili. They contain various questions regarding the session, LOANO, its scope, its impact on you, and your willingness to be included in the next cohort. Q: What does "equals" in the jquery selector mean? For example, the following code work to find an element which is the next sibling of the clicked element:

```
$('#myElement').click(function 82157476af
```
